

RU 2020 GRG Student's Profile

Godfrey Barasa Owuor

University: University of Eldoret, Kenya

Program: MSc. in Soil Sciences

GRG Project: Greenhouse gas emissions, soil carbon stocks and livestock watering points in agropastoral rangelands of Taita Taveta hills, Kenya (GRESOL)

Research Focus: Soil Carbon stocks: A precursor of greenhouse gas emissions in different livestock production systems of Taita Taveta, Kenya

About me: I am a nature lover, an enthusiastic environmentalist and a researcher. Because soil is the nexus between the four spheres of life, implying that by being a soil scientist by training, it is a collective responsibility to keep our environment clean and healthy. I admire my career and want to do more.

I also love to interact with new people, play volleyball and sometimes want to learn something new. I anticipate engaging in more impactful research that will provide practical solutions to the end-user, especially in the SSA. My research interests include sustainable agriculture, greenhouse gas emissions, climate-smart agriculture, and natural resources.

My favourite quote:

“The nation that destroys its soil destroys itself.” - *Franklin D Roosevelt*
