

RU 2020 GRG Student's Profile

Kusiima Nasuru

University: Makerere University

Program: MSc. in Animal Sciences

GRG Project: Developing equations for predicting feed intake by pastoral/agro-pastoral livestock: tackling uncertainty in Uganda's national enteric methane emissions inventory.

Research Focus: Estimation of Enteric Methane Emission factors for pastoral and agro-pastoral goats in Uganda using the IPCC tier 2 methodology.

About me: I reflect a varied personality, including ambition and the qualities of exploration and thoughtfulness. I am motivated by my love for learning and succeeding in becoming an outstanding animal scientist. I hold an honours degree in BSc. Agriculture from Makerere University, which grew my fanatical interest in agricultural research. I run an agro consultancy firm, where I disseminate knowledge and skills to farmers to increase agricultural production while minimising costs and losses in today's modern agriculture. I enjoy reading, writing and hanging out with loved ones in my free time.

My favourite quote:

“Speculation and the exploration of ideas beyond what we know with certainty are what lead to progress” *Lisa Randall*
